Please consider the redundancy of having associations have signatures on file for faxed correspondance. This will raise costs and consume more of the valuable commodity - time - than really is necessary. Members depend upon Associations to make offerings and renewals via fax, but may be discouraged to receive the information if they think that they have to sign everything. Also, new members may never be recruited due to not having a signature on file to be able to fax info to in the first place.

Let's work on getting spammers and max faxers controlled not legitimate associations.
